# Introduction

- ▶ Pawsitive Futures is a web portal application developed to enhance the pet adoption process, featuring three main modules: User, Shelter, and Admin.
- ▶ The User Module enables users to browse pet listings, submit adoption applications, and schedule appointments through a user-friendly interface.
- ▶ The Shelter Module allows shelters to efficiently manage pet listings, track applications, and coordinate appointments.
- ▶ The Admin Module provides comprehensive oversight of the platform, ensuring smooth operations and effective data management.
- ▶ The system includes secure payment processing for adoption fees. The application is developed using Spring Boot for backend services, React for the frontend, and MySQL for data management, ensuring a dynamic and effective user experience.

# Architecture

- ▶ Backend (Spring boot):-Spring Boot is used to create a RESTful API that handles the business logic and data management for the application. It manages operations like user authentication, pet data retrieval, adoption request processing, and database interactions.
- ▶ Frontend (React): React is used to build the user interface. It interacts with the Spring Boot backend through API calls. The frontend handles rendering the pet listings, forms for adoption requests, and user interactions.

# Technology platform used for project

- ▶ Spring boot:-For backend development, including RESTful APIs and database management.
- ▶ React:-React is used for building responsive and interactive user interface.
- ▶ MySQL database:-MySQL is used for storing user details, pet details, adoption requests, appointment details.

# User roles and responsibilities

User

A user is a visitor interested in adopting a pet. They can browse and search available pets, view detailed profiles, submit adoption requests, and manage their personal information and saved pets while tracking the status of their adoption requests.

Admin

The admin manages the platform, ensuring smooth operations and data integrity. They handle user accounts, moderate content, maintain system performance.

Shelter

A shelter manages pet listings and the adoption process, creating profiles with detailed information, reviewing adoption requests, and updating pet statuses. They also communicate with potential adopters to provide information and arrange visits.

# Future extensions or scope

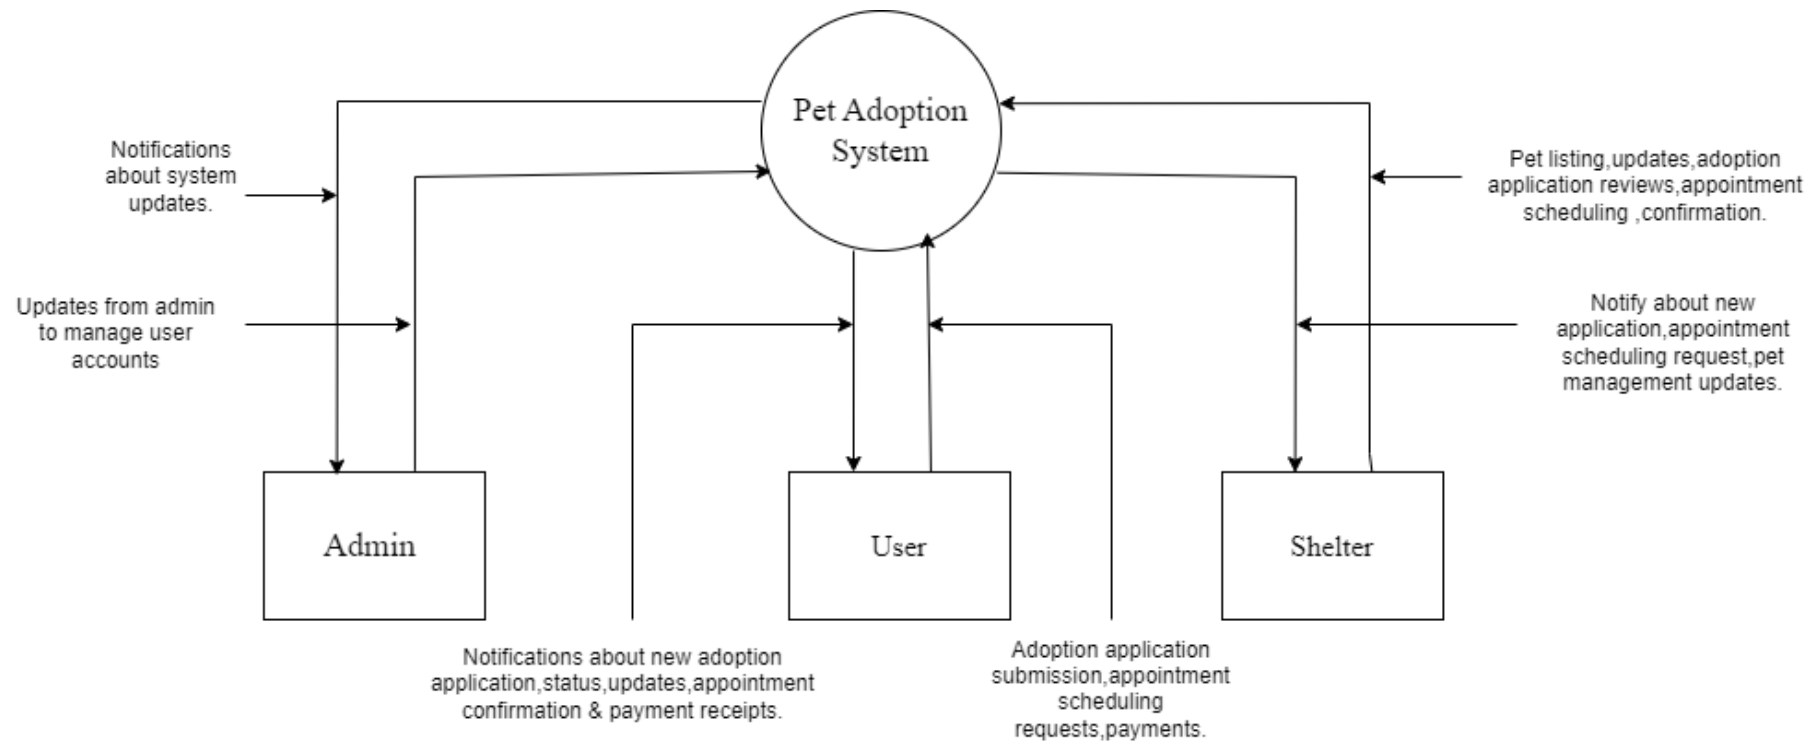

- ▶ Mobile App:
  - Develop a mobile version of the application.
- ▶ Advanced Search:
  - Add more filters and sorting options for pet searches.
- ▶ Notifications:
  - Implement real-time notifications for adoption status updates.

# Screen Shots

A screenshot of a web browser window displaying a signup page. The browser's address bar shows the URL `localhost:3000/users/signup`. The page has a light orange background. In the center, the word "Signup" is written in a bold, orange font. Below it, there are three input fields: "Email", "Password", and "User". Each field has a thin orange border. The "User" field is a dropdown menu with a small downward arrow on the right. Below the input fields is an orange button with the text "Signup" in white.

# Conclusion

- ▶ The Pet Adoption Project successfully connected many animals with caring families, increasing adoption rates and making the process easier. Through community efforts and partnerships with shelters, we helped create lasting bonds between pets and their new owners. Continued support will be key to helping more animals find their forever homes.

The background features abstract, overlapping green geometric shapes, primarily triangles and polygons, in various shades of green, creating a modern and dynamic design. The shapes are layered, with some appearing more prominent than others, and they extend from the right and bottom edges towards the center.

Thank You
